PROJECTS

1. Login & Signup System Built using
HTML, CSS – Frontend-only UI to
simulate user authentication.

2. Carbon Footprint Calculator

Developed using Python (Django),
HTML, CSS, SQLite to calculate users'
carbon footprint based on inputs.

3. Digital Library (Ongoing Project)

Being built with Python, Django,
HTML/CSS – a library system to manage
books, users, and lending.

4 Car rental system (Data base) Built a
basic car rental database using MySQL
to store car details, bookings, and
customer information.
